PROFESSIONAL SUMMARY

Full Stack Engineer with 2+ years of experience building scalable, production-grade web applications using React, TypeScript, Node.js, Express, and MySQL. Experienced in designing secure REST APIs, authentication systems (JWT/OAuth, AWS Cognito), cloud deployments, CI/CD automation, and performance optimization. Proven ability to own complete features end-to-end — from system architecture and API design to Dockerized deployment and production support. Strong engineering mindset with a focus on scalability, modularity, and code quality in Agile environments.

CORE COMPETENCIES

- | | | |
|------------------------------|-------------------------------------|----------------------------------|
| ▸ Full Stack Development | ▸ REST API Design & Security | ▸ Authentication & Authorization |
| ▸ Cloud Deployment (AWS) | ▸ CI/CD Automation | ▸ Performance Optimization |
| ▸ Database Design & Indexing | ▸ Scalable Application Architecture | ▸ Agile / SDLC Ownership |

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript (ES6+), Python (Basics), SQL, HTML5, CSS3
Frontend:	React.js, React Router, Redux Toolkit, React Hook Form, Zod, Tailwind CSS, Shadcn UI, Vite, Code Splitting, Lazy Loading, Responsive Design
Backend:	Node.js, Express.js, REST APIs, JWT Authentication, OAuth2, Role-Based Access Control (RBAC), WebSockets, API Rate Limiting, Event-Driven Architecture, Microservices
Database:	MySQL, PostgreSQL, Database Design, Query Optimization, Database Indexing, Redis (Caching)
Cloud & DevOps:	AWS, GCP (Authentication, Virtual Machines, Object Storage, Container Services, Managed Database, Messaging/Pub-Sub), Docker, Nginx, GitHub Actions, CI/CD, Linux
Engineering:	SOLID Principles, Design Patterns, Data Structures & Algorithms, Modular Architecture, Async Processing
APIs & AI:	Google Gemini API, Model Context Protocol (MCP), Third-Party API Integration
Tools & Practices:	Git, GitHub, Jira, Postman, VS Code, Agile, Code Reviews, Debugging, Production Support

WORK EXPERIENCE

Full Stack Developer — Voltuswave Technologies India Pvt. Ltd.

Feb 2024 – Present | Hyderabad, India

- Developed and maintained **scalable full-stack applications** using React (TypeScript), Node.js, Express, and MySQL, supporting multi-tenant business workflows across the complete SDLC — from architecture and API design to deployment and production support.
- Designed **secure RESTful APIs** with JWT/OAuth-based authentication, RBAC authorization, input validation, and tenant-level access control, ensuring enterprise-grade API security and data isolation.
- Reduced deployment errors and release cycle time by automating **CI/CD pipelines** using GitHub Actions with Dockerized workflows, eliminating manual release steps and ensuring environment parity.
- Improved frontend performance by **~40%** through lazy loading, code splitting, caching strategies, and optimized API request handling — significantly reducing page load times and improving user experience.
- Containerized services with **Docker** and deployed to **AWS/GCP**, achieving high availability, zero-downtime releases, and reliable production deployments.
- Collaborated in **Agile sprints** with cross-functional teams, participated in code reviews, debugged production incidents, and consistently delivered production-ready features aligned with business requirements.

PROJECTS

Voltusfreight — Multi-Tenant Freight Forwarding Platform

React, TypeScript, Node.js, MySQL, AWS Cognito, Docker, GitHub Actions

- Architected end-to-end authentication and authorization (signup, login, RBAC) using **AWS Cognito**, enabling secure token management, session control, and strict tenant-isolated data access across multi-tenant workflows.
- Implemented **real-time user activity tracking** and analytics dashboards capturing post-login actions, session duration, and behavioral patterns — providing administrators with operational visibility and business insights.
- Designed and developed a responsive, **component-driven UI** with React, TypeScript, Tailwind CSS, and Shadcn UI, accelerating delivery of tenant-facing modules and ensuring consistent design system adoption.
- Built RESTful APIs with Node.js and Express for shipment, quote, and document workflows; modeled **MySQL schemas with tenant-scoped queries and database indexing** to enforce data isolation and optimize query performance.

- Containerized microservices with **Docker** and deployed to **AWS**, automating builds, tests, and zero-downtime releases via GitHub Actions CI/CD pipelines.

StockPuls — AI-Powered Investment Tracker (NSE/BSE) *React, TypeScript, Node.js, Express, MySQL, Tailwind CSS, Gemini API*

Personal Project

- Built an **AI-powered investment tracker** for Indian equities (NSE/BSE) with portfolio watchlists, real-time stock price tracking, interactive charts, and AI-generated BUY/HOLD/SELL recommendations with confidence scores.
- Integrated **Google Gemini API** for per-stock and portfolio-level AI analyses; implemented **intelligent result caching in MySQL** to eliminate redundant API calls, reduce API spend, and improve response times.
- Designed a centralized **React Context with multi-dimensional per-symbol caching**, preserving user state across navigation, eliminating duplicate API calls, and improving application responsiveness.
- Implemented **JWT authentication** with React Hook Form + Zod validation, protected routes, and Axios interceptors for 401 handling and seamless token refresh.
- Optimized bundle size using **React.lazy and Suspense (code splitting)** across pages and heavy components, reducing initial load time significantly.

EDUCATION

Full Stack Development — Nxtwave Disruptive Technologies	<i>Hyderabad Jan 2024</i>
B.E. Civil Engineering — Chaitanya Bharathi Institute of Technology (CBIT)	<i>Hyderabad May 2023</i>
